DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-29, drawn to a spin coating process using at least one solvent, classified in class 427, subclass 240.
 - II. Claims 30-34, drawn to a spin coating process using first and second speeds and dispensing in an arc translation, classified in class 427, subclass 240.
 - III. Claim 35, drawn to a spin coated product made by a process using first and second speeds and dispensing in an arc translation, classified in class 428, subclass 64.2.
 - IV. Claim 36, drawn to a spin coated product made by a process using at least one solvent, classified in class 428, subclass 64.2.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and IV, and Inventions II and III, are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case inventions I and IV are directed to a method of spin coating using at least one solvent having a boiling point of about 110-250 degrees C, and a product made thereby. Invention II and III are directed to a method of spin coating using first and second speeds and moving the dispenser via an arc translation, and a product made thereby. Inventions I and IV, and II and III, have different modes of operation and different functions.

Application/Control Number: 10/063,398

Art Unit: 1762

3. Inventions I and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another materially different process, for example the product can be made by a dipping or spraying process instead of by spin coating.

- Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another materially different process, for example the product can be made by a dipping or spraying process instead of by spin coating.
- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 6. Due to the complexity of the restriction requirement, the restriction requirement is being mailed.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 1762

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kirsten C Jolley whose telephone number is 571-272-1421. The examiner can normally be reached on Monday to Thursday and every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shrive P Beck can be reached on 571-272-1415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
